RESTAURANT/BAR

REFLECTOR ENHANCER Flooring

Engineered floors to support
high traffic clientele

REFLECTOR ENHANCER:

The REFLECTOR Enhancer Flooring System is a specialty, high build, self-leveling, fluid-applied floor coating. This system is engineered for commercial and industrial applications where a durable, long-lasting, aesthetically unique, easy to maintain and completely custom floor is required. These floors are unique and unrepeatable making your floors a one-of-a-kind masterpiece.

HERMETIC Flake System:

The HERMETIC Flake Flooring System is a durable, seamless, chemical resistant floor providing adjustable levels of slight texture and color to match any design theme or surroundings. This aesthetic floor includes multi-colored vinyl flakes (size options available) imbedded and fused between product layers providing an appealing look and increase slip resistance. When cost is a factor, this system is a more economical way to finish the floor.

Every year millions of square feet of VCT and ceramic tile are installed into restaurants and bars all around the world. Many of the decisions are influenced by the speed and ease of installing these types of floors; however, this may not always be the best choice for a long-lasting floor for your establishment. The floors in your building probably get the most wear and tear and take the most abuse on a daily basis and yet not as much thought goes into the best choices offered for long-term benefit. Other considerations:

COST

Resinous flooring is very comparable, if not less expensive, to VCT and ceramic tile and there are component variations in each and every system we offer to help balance cost with other considerations.

LONGEVITY

If properly maintained, these floors are much longer lasting than other flooring options.

EASE OF MAINTENANCE

Resinous floors are easy to maintain due to their seamless aspect, no grout lines where dirt, mold, and bacteria can accumulate. These floors need no special cleaners or equipment to clean them and they have strong chemical resistance to many chemicals commonly found in most food industry cleaners.

QUALITY CONTROLS

All of our flooring systems were engineered to meet or exceed: FDA, USDA, OSHA, and ADA compliance. They are chemical resistant to many of the ingredients used in the restaurant/bar industry such as: various cooking oils, juices, and ethanol which is found in many popular alcoholic drinks.

AESTHETICS

While this feature may not be the most important factor in your decision of the type of floor it is a critical impression for first and on-going customers. If your floors don't look fresh and up-to-date, what impression does that give about the rest of your establishment? Your floors can be as custom to your business as you wish. Logos can be added, color schemes can be accommodated as though it was designed uniquely for you.
